CAREER OBJECTIVE

Motivated Computer Engineering student seeking an entry-level Full Stack Developer role to contribute to real-world, scalable products. Passionate about product building, development, and client delivery, with hands-on experience leveraging AI tools to accelerate development. I understand that building impactful products demands not only strong technical skills but also effective communication, business acumen, and problem-solving — areas I actively cultivate alongside my technical growth.

PROJECTS

► PathSarthi – Frontend Web Project

- Developed a responsive frontend web application using HTML, CSS, and JavaScript for mentor discovery and session booking.
- Designed and structured an intuitive UI with interactive components to enhance user engagement across mobile, tablet, and desktop.
- Applied responsive design principles ensuring cross-device compatibility and smooth navigation.
- Tech: HTML, CSS, JavaScript

► SkillNest – Full Stack Web Application

- Built a collaborative learning platform using Django where students can post doubts, and peers or an AI chatbot resolve them in real time.
- Implemented secure authentication, student account management, and CRUD operations.
- Integrated an AI chatbot for automated query resolution; used Canva AI for design and Antigravity for backend acceleration.
- Tech: Django, Python, HTML/CSS, AI Chatbot Integration

► Auto Flex – Product Based Application (Django)

- Developed a local vehicle rental platform connecting vehicle owners with renters, allowing owners to list idle vehicles.
 - Implemented OTP-based verification for secure vehicle handover and built a marketplace-like booking interface.
 - Applied responsive design for cross-device accessibility; focused on multi-role UX for both owners and renters.
 - Tech: Django, Python, HTML/CSS
-
